

GENERIC PRINT HEAD CLEANING INSTRUCTIONS FOR INK JET PRINTERS

Every so often we all have the same problem! Halfway through a mammoth printing job the printer starts printing lines or nothing at all from one of the colours.

After wasting gallons of ink cleaning the print head using the software solution, we start scratching our heads, contemplating suicide or throwing the printer in the bin and going down the pub to solve the problem with your mates over a pint or two. As the last resort you maybe reading this article and hopefully I can help sort out your problem (because we have already been there).

Firstly stay coooooool! Now read on:

If you are using a Hewlett Packard, Lexmark or similar with the ink head as part of the cartridge try this method, place a double layer of kitchen towel in a flat bottomed receptacle then soak the towel with ample amounts of cleaning fluid supplied by Laser Designs, then place the ink head on to the towel and leave for around 4 hours, you will notice when you remove the cartridge that there will be a rainbow effect printed on the towel, hopefully this will be the dried ink flowing out of all the clogged holes in the print head. Dry the head very carefully using a new kitchen towel, now try printing 2 -3 full A4 colour photographs on plain paper to see if you have the results you are trying to achieve, if not repeat the cleaning process but leave overnight.

If you are using an Epson or similar printer with the ink head integrated into the printer try filling each suspect ink cartridge with cleaning fluid leave for around 2 hours so that the ink reservoirs are sufficiently full, then print 10 A4 sheets of paper as though you are printing a full colour photograph, then leave for another 2 hours and repeat the process, that should cure the problem, now fill them up with ink and print some more pages until your satisfied with the print quality.

Our cleaning fluid is manufactured in England and is formulated to achieve the desired results.

It is important that the print head is handled with extreme care!
